

Electric Hair Trimmer

ABSTRACT

5    An electric hair trimmer includes a housing with a handle  
and a head extending from the handle. Two fixed arrays of  
cutting teeth are attached to the head and face in opposed  
directions away from one another. Two movable arrays of  
cutting teeth face in opposite directions away from one  
10 another and each cooperates with a respective one of the  
fixed arrays of cutting teeth. An electric motor is  
located within the housing and affects movement of the two  
movable arrays of cutting teeth. The hair trimmer is  
designed for self-use in trimming one's hair and can be  
15 grasped by either hand and moved back and forth across the  
scalp somewhat in a brushing manner.
